

Bug Report

EaseMyTrip

Reported By: Sai Kiran Somu
Date: 30-May-2026
Document Version: 1.0

1. BUG DETAILS

BUG ID	TITLE	MODULE	SEVERITY	PRIORITY	STATUS	REPRODUCIBILITY
BUG-001	Infinite Skeleton Loader Persists After Hotel Results Load	Hotels	Medium	Medium	Open	100%

2. ENVIRONMENT

Operating System	Windows, Android
Browser	Brave, Microsoft Edge, Google Chrome
Device	Desktop, Poco M2 Pro
Application Version / Build Tested	Web Application
Application URL	https://www.easemytrip.com/hotels

3. SUMMARY

Hotel search results are displayed successfully, but loading placeholders (skeleton loaders) continue to remain visible on the page. The issue is reproducible across multiple browsers and remains visible even after waiting more than five minutes.

4. PRECONDITIONS

- User has internet connectivity.
- User is able to access EaseMyTrip website.
- Valid city and travel dates are available for search.

5. STEPS TO REPRODUCE

1	Open EaseMyTrip website.
2	Navigate to Hotels section.
3	Search for hotels in Hyderabad.
4	Select valid check-in and check-out dates.
5	Click Search.
6	Wait for hotel results to load.
7	Observe the search results page.
8	Optionally apply filters such as: (This step is to reduce the no of hotels and observe the application behaviour) • 5 Star • Lowest Price Guarantee • Last Minute Deals
9	Observe the loading placeholders.

6. EXPECTED & ACTUAL RESULT

EXPECTED RESULT	ACTUAL RESULT
Loading placeholders should disappear once hotel results are loaded successfully. Only hotel results should remain visible.	Hotel results are displayed successfully, but loading placeholders continue to remain visible indefinitely.

7. INVESTIGATION PERFORMED

Check	Method Used	Result	Finding / Observation
API Validation	Browser Network Tab	Pass	Hotel Search API returned HTTP 200 response successfully.
Browser Testing	Brave, Microsoft Edge, Google Chrome	Reproduced	Issue reproduced in all browsers.
Data Validation	API Response	Pass	Hotel data was available in response and matched displayed results.
Hotel Count Validation	DOM Inspection	Pass	Hotel count changed correctly when filters were applied.
Wait Time Validation	Manual Observation	Reproduced	Loader remained visible even after waiting more than 5 minutes.
Module Validation	Hotels vs Flights	Reproduced	Issue observed only in Hotels module. Flights module worked normally.

8. BUSINESS IMPACT

Direct Impact	- Users can still search and view hotels. - Hotel booking functionality remains available.
Indirect Impact	- Creates confusion by showing both loaded results and active loading indicators. - Gives impression that additional results are still loading. - Reduces user confidence in application responsiveness. - May negatively impact user experience. - May increase page abandonment for some users.

9. POSSIBLE CAUSE

Based on observations, the issue appears to be related to frontend loading-state management.
Possible reasons: - Loading state may not be cleared after hotel results are rendered. - Infinite scroll completion condition may not be met. - Skeleton loader visibility flag may remain enabled.
This is only an observation and not a confirmed root cause.

10. ATTACHMENTS / EVIDENCE

Screenshot	Video Recording	Network Logs	API Response
Evidence-01 Evidence-02 Evidence-03 Evidence-04	NA	Evidence-02	Evidence-03

11. NOTES

- This observation was identified during normal usage of the application. - No security testing, intrusive actions, unauthorized access attempts, or exploitation techniques were performed. - This report is shared solely to help improve product quality and user experience.
--

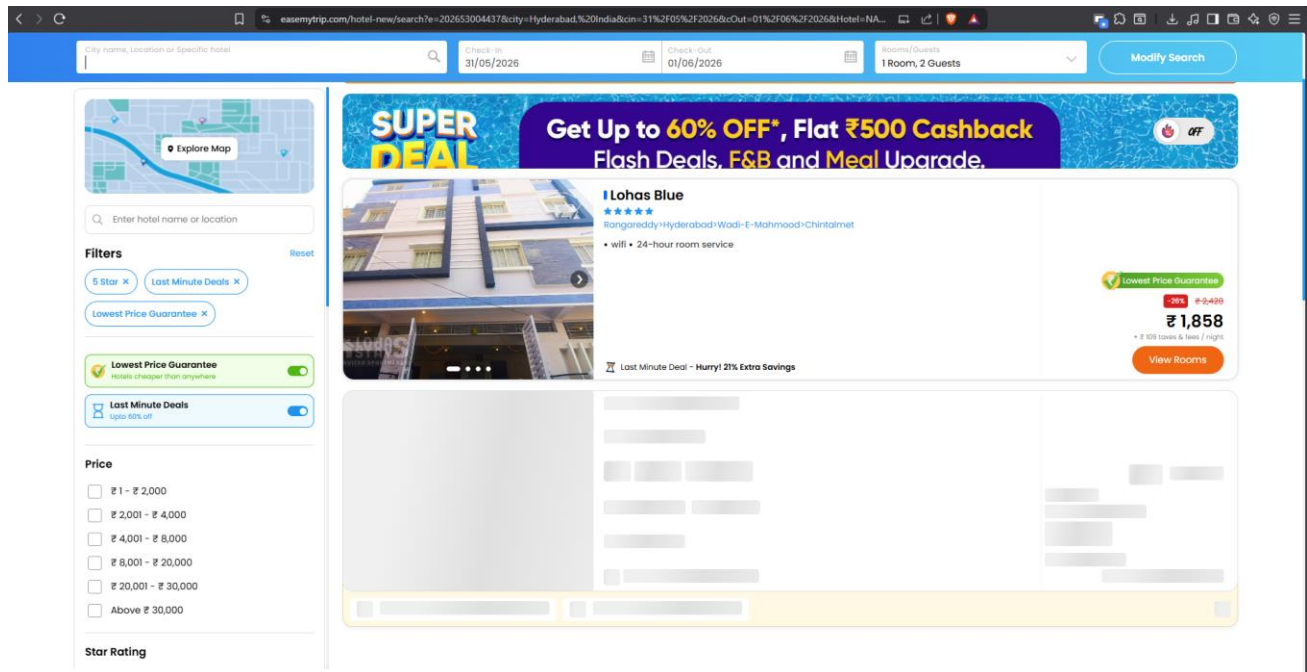

SEVERITY REFERENCE

SEVERITY LEVEL	DESCRIPTION
Critical	Application is unusable. Core business functionality is blocked.
High	Major functionality is affected. No reasonable workaround is available.
Medium	Functionality works but user experience is negatively affected.
Low	Minor issue with minimal impact on the user or business.

EVIDENCE

Evidence 1: Hotel displayed + Skeleton visible

Hotel results are displayed successfully on the page. However, skeleton loading placeholders remain visible even after the hotel data has been loaded and rendered.

Evidence 2: Network Status 200 OK

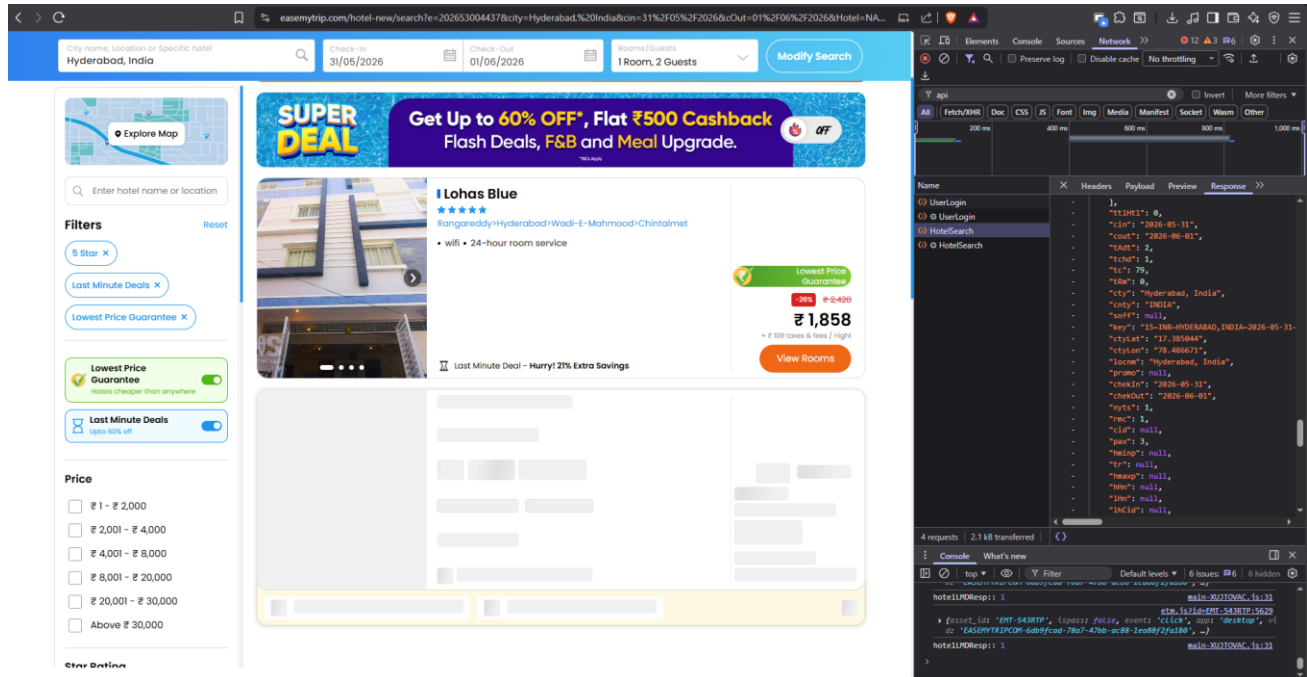

Hotel Search API request completed successfully with HTTP 200 status. No API failures were observed during testing.

Name	Status	Type	Initiator	Size	Time
UserLogin	200	xhr	polyfills-MH2GNY63.js:1	(ServiceWorker)	106 ms
UserLogin	200	fetch	ngsw-worker.js:1835	0.3 kB	103 ms
HotelSearch	200	xhr	polyfills-MH2GNY63.js:1	(ServiceWorker)	409 ms
HotelSearch	200	fetch	ngsw-worker.js:1835	1.9 kB	407 ms

EVIDENCE

Evidence 3: API Response Success

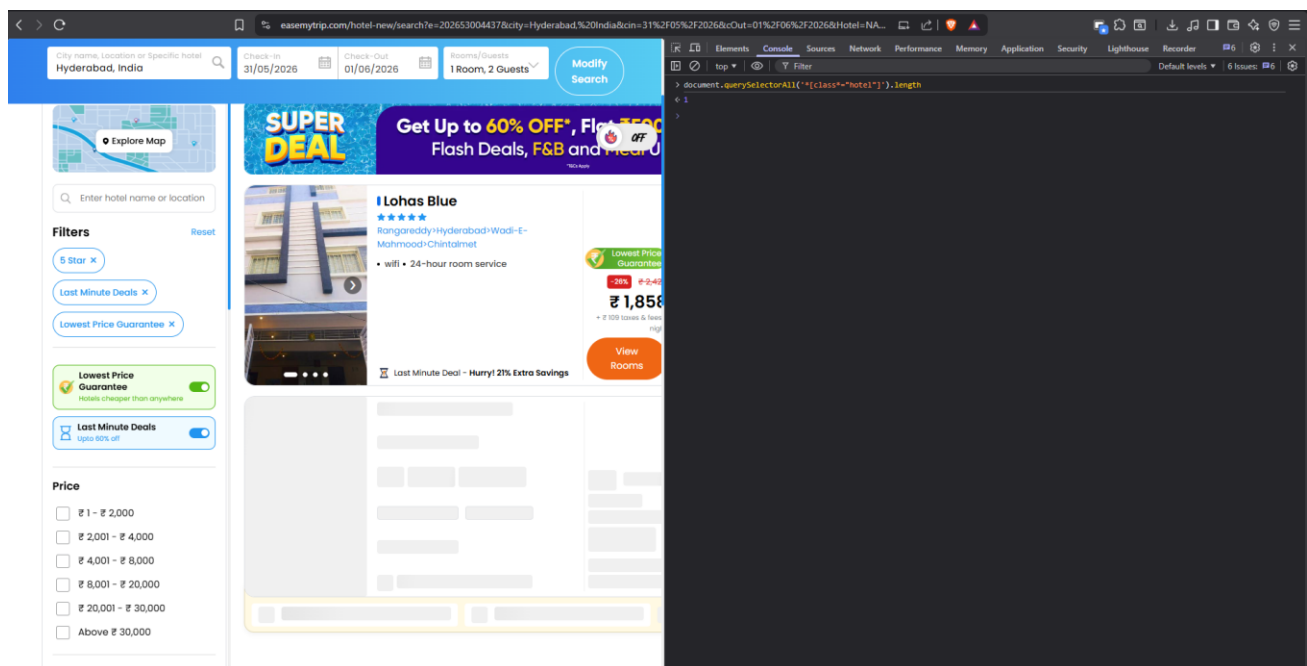

API response shows tchd: 1, confirming one hotel record was loaded successfully. The hotel is displayed on the page; however, the skeleton loader remains visible after loading is complete.

The screenshot shows the EaseMyTrip website interface for a hotel search in Hyderabad, India. The search parameters are: Check-in: 31/05/2026, Check-out: 01/06/2026, Rooms/Guests: 1 Room, 2 Guests. The search results display a 'SUPER DEAL' banner and a list of hotels. The first hotel listed is 'Lohas Blue' with a 4.5-star rating, located in Rangareddy, Hyderabad. The price is ₹1,858. The right side of the image shows the Network tab in the browser's developer tools, displaying the API response for the hotel search. The response is a JSON object with a 'tchd' field set to 1, indicating one hotel record was loaded successfully.

Evidence 4: DOM Validation

DOM validation confirmed that hotel elements were rendered successfully (count = 1 after applying filters), indicating that hotel data was loaded despite the persistent loading placeholders.

The screenshot shows the EaseMyTrip website interface for a hotel search in Hyderabad, India. The search parameters are: Check-in: 31/05/2026, Check-out: 01/06/2026, Rooms/Guests: 1 Room, 2 Guests. The search results display a 'SUPER DEAL' banner and a list of hotels. The first hotel listed is 'Lohas Blue' with a 4.5-star rating, located in Rangareddy, Hyderabad. The price is ₹1,858. The right side of the image shows the Console tab in the browser's developer tools, displaying the result of a DOM validation query: document.querySelectorAll('.hotel').length, which returns 1, confirming that one hotel element was rendered successfully.
